Resource Accounting for Sustainability Assessment

The Nexus between Energy, Food, Water and Land Use

Edited by Mario Giampietro, Richard J. Aspinall, Jesus Ramos-Martin and Sandra G. F. Bukkens

Series: Routledge Explorations in Sustainability and Governance

‘This is a cohesive book taking on different facets of a unified issue. And what an issue it is; huge, daunting, and something we all knew must be done. But nobody else had the vision and courage to take it on...Anyone wishing to address metabolism of biology, ecology and society simply must get on top of this work, or just be left behind in the muddle that was heretofore mistaken as acceptable. There are no excuses now.’ – Timothy F. H. Allen, University of Madison, USA

‘...This book is not only oriented to foster debate within academia but especially to guide decision making in public policy truthfully committed and concerned with the future of our civilization. For these reasons I fully recommend the reader to immerse in the contents of this book.’ – Andrés Arauz, Vice Minister of Planning and Development for Well Living, Ecuador

Resource Accounting for Sustainability Assessment: The nexus between energy, food, water and land use offers an approach for multi-scale, integrated assessment and presents a comprehensive and original method of resource accounting for integrated sustainability assessments. The approach is illustrated with three detailed case studies: the islands of Mauritius, the Indian state of Punjab, and the energy economy of South Africa. This provides insights through exploring the relationships between flows of goods, services, and materials, and the funds to be reproduced of natural, human, social, financial, physical, and economic capitals, at multiple scales. The book provides a badly needed quality control on the information used in deliberative processes about policy and planning activities for sustainability and food, water, energy and environmental security issues.

This innovative book will be of interest to researchers, students, and practitioners in the fields of sustainability science, international development, industrial ecology, sustainable resource management, geography and ecological economics.
